

Origami Network

A protocol for building decentralized marketplaces using the Ethereum Blockchain

WORKING PRODUCT
REAL USE CASES

PROVEN TRACK RECORD
BACKED BY TWO BANKS

TEAM WITH EXPERIENCE
SEVERAL CUSTOMERS

Problems

For one, the speed and cost by which online marketplaces are developed and run can be improved.

Secondly, at this moment in time, escrow payments are still very expensive and far from accepting crypto-currencies as payments.

Lastly, the review process for online marketplaces contains several major flaws that must be addressed before marketplaces can be truly decentralized.

Solutions

The Origami Network is based on **three self-sufficient** modules:

- **Origami Marketplace**
- **Origami Payment, and**
- **Origami Review.**

These complementary modules can be used in a modularized fashion or together.

The Origami Network is the only Blockchain-Powered protocol that builds decentralized online marketplaces faster and easier than current models allow, while also utilizing blockchain-based escrow payments and improving review systems.

The result is faster, easier, cheaper, and more reliable marketplace experiences for both consumer and business owner.

Origami Network already has several customers using the solution.

Details about the ORI tokens

Ethereum based

ORI is an ERC20 token

Total token supply

50 000 000 ORIs

Token Sale Hardcap

5 000 ETH

Token Sale ends

The 23rd March 2018

Key members

Vincent Pichon
CTO and founder

Julien Bruitte
CEO and founder

Alexandre Duquenoy
CMO and founder

Our company is legally registered in France since january 2015.

We have employees in marketing / development (more informations in the whitepaper).

Partners / Advisors

Additional info

Soft cap reached on the first day

Whitepaper

Unsold token will be burned
